LET English: Reading Evidence, Grammar, and Composition

LET · english · BoardPrep lesson v1

Official examination scope

Use PRC's current LEPT TOS and alignment issuances for exam scope. DepEd's K–12 English guide supports the curriculum competencies represented here. This original lesson covers selected language and reading skills; it is not a complete English specialization guide.

Learning objectives

- Infer a conclusion from a short passage while respecting its evidence limits.
- Explain how grammar and reference choices affect meaning.
- Organize a short response around a clear claim and supporting evidence.

1. Read a claim through its evidence

A reader should distinguish what a passage states, what it suggests, and what remains unknown. Identify the central claim, the evidence offered, and the connection between them. Then ask whether the evidence actually supports the conclusion or merely occurs at the same time. In teaching and assessment, a response that cites relevant details and explains their connection is stronger than one that repeats a claim without evidence. Use an original passage as a shared text, then ask learners to justify one inference and identify an alternative explanation.

2. Grammar, agreement, and clear reference

When revising a sentence, locate its main subject and verb, then check whether their forms agree. A phrase between subject and verb may be informative but does not normally become the subject. Pronouns need an identifiable antecedent and a clear number reference; modifiers should sit close to what they describe. A grammatical correction should preserve the intended proposition. Read the revised sentence in context to make sure a local edit has not changed the writer's meaning or obscured the relationship between ideas.

3. Vocabulary, purpose, and text structure

Use context clues as evidence rather than as a guess: nearby definitions, examples, contrasts, and cause-and-effect relationships narrow a word's meaning. Text structure can signal whether a writer is comparing ideas, explaining a sequence, or describing a problem and response. Purpose and tone should be inferred from the whole passage, including word choice and the intended audience. A single loaded word is not enough to label the tone if the rest of the passage points elsewhere.

4. Composition, cohesion, and feedback

A useful paragraph makes one claim, supports it with relevant detail, and explains why that detail matters. Cohesion comes from clear reference, logical sequencing, and transitions that accurately express the relationship between sentences. In a classroom response, feedback should point to the evidence or sentence move that needs revision and give the learner a chance to try again. A polished surface is not enough if the paragraph's reasoning is unsupported; likewise, a useful draft can be improved without erasing the writer's voice.

Read a finding without overclaiming

Question: Learners compared two explanations using the same evidence, and most revised their original claim. What does this show?
1. Identify the observed action: learners compared explanations against evidence.
2. Identify the observed response: most revised their initial claim.

3. Avoid claiming that they permanently mastered the concept or that comparison alone caused the change.
Answer: The activity prompted evidence-based reconsideration rather than simple recall.
Check: The conclusion describes the observed reasoning behavior without making a causal or mastery claim.

Common misconceptions

- A single sentence can always establish a passage’s purpose.
- A grammar edit is correct even if it changes the intended meaning.
- A revised response proves durable learning without later evidence.

Practice patterns

- Point to the exact sentence or detail supporting an inference.
- Check the main subject and antecedent before revising.
- Give feedback that names a next step the learner can perform.
